TanCat Pro Deployment Licence

Install and licence activation — one deployment. A licence is perpetual for the version you buy and includes 12 months of updates.

1. What this licence covers

- One **deployment**: one installation of TanCat serving one organisation.
- Unlimited test runs and evidence exports on that deployment.
- A perpetual licence for the version you buy, with 12 months of updates included.
- Updates after the first 12 months are paid; security fixes and bug fixes in the version line you bought stay free.
- Not counted per user — your whole team may use it. Do not share or resell the key.

2. Requirements

- Python 3.14+ and `uv`
- An OpenAI-compatible LLM endpoint you control (llama.cpp, Ollama, LM Studio, or similar)
- Chromium, installed by Playwright

3. Install

```
git clone https://github.com/tancat-ai/tancat
cd tancat && uv sync && playwright install chromium
```

```
bash launch_ui.sh      # Streamlit UI
bash launch_cli.sh     # interactive CLI
```

4. Activate your licence

Your licence key arrives by email when you purchase. Give it to the deployment in **any one** of these three ways:

- **Environment variable** (best for CI): `AITEST_LICENSE_KEY=<your key>`
- **A file you point at**: `AITEST_LICENSE_FILE=/path/to/license.key`
- **The default key file**: save the key as `~/.ai-test-gen/license.key`

Check it worked. Open the UI — the sidebar shows *License & Usage*. A licensed deployment reports unlimited runs and exports. If the key is missing or invalid the product keeps working on the free tier; it never locks you out of the open-source core.

5. Where your data goes

Your data stays on your machines when you point TanCat at a local or self-hosted LLM. The product runtime makes outbound calls only to **your** configured LLM endpoint and **your** target site — no telemetry, no update check, no vendor call. Cloud OpenAI and OpenRouter are supported if you choose them. Verified by an audit that runs in CI: `docs/security/egress-audit.md`.

6. Updates

Updates are files, not a service: they arrive on Lemon Squeezy and on the releases page (github.com/tancat-ai/tancat/releases), and you choose when to install them. The product makes **no runtime update check** and calls no vendor server.

7. Support

Support is provided by email at **hello@tancat.dev**, by the developer who builds TanCat. You get help with installation, licensing, and defects in TanCat. We aim to reply within two working days, Monday to Friday, UK business hours. Support does not include custom development, third-party systems, or on-site work, and we do not offer telephone or out-of-hours support. A contractual service level is available on request.

TanCat is a sole-trader business based in the United Kingdom. Licence terms: https://tancat.dev/terms.html · Privacy: https://tancat.dev/privacy.html
Merchant of record: Lemon Squeezy. Their terms govern the purchase transaction; these licence terms govern the software.
